

# It's prime time to Free Palestine!

## FROM THE OCCUPIED TERRITORIES TO OUR NEIGHBORHOODS

Amazon is the technologic back bone of the Israeli apartheid regime - they have multi-billion dollar contracts providing cloud services and servers to the Israeli state, its police and military. The infrastructure that Amazon provides enables them to communicate, to collect, analyze and archive the data needed for the expansion of illegal settlements and the repression of the Palestinian people.

We can look more closely at what they do here to understand just how deeply our struggles are linked with the struggles of the Palestinian peoples - what Amazon does there, they do here. Amazon Web Services is the backbone of ICE's Investigative Case Management (ICM) system which aggregates and analyzes a vast amount of public and private data to track and deport immigrants.

Amazon also maintains a vast network of real time surveillance via Ring Cameras and partners with more than 2000 police departments across the country to share feeds and data from them - including the Olympia Police Department.
